

Farris Partners Named in the Lexpert Special Edition: Technology 2026

Technology is no longer a novelty or a luxury, but an essential part of our businesses, industries and society.

Our multidisciplinary legal team understands the nature of this challenging field and can help businesses keep pace with the rapid changes.

One of our strengths is the diversity of the experience we bring to organizing and financing a wide range of science and knowledge-based businesses, with intellectual property protection as a main component of our work. We work with hardware and software developers, manufacturers, distributors, and e-commerce service providers. They range from early stage innovative technologies to well-established companies marketing and distributing their products and services throughout the world. We also act for large public and private entities seeking to procure technology.

Farris assists clients in the structuring, drafting, negotiation, and due diligence for a broad spectrum of complex technology-related transactions, including those involving technology transfers and licensing, acquisitions and sales, collaborations, strategic alliances and joint ventures, financings, outsourcing, research and development, original equipment manufacturing agreements, marketing, distribution and value-added reseller agreements, and procurement and project implementation.

We also assist in the preparation of agreements required for day-to-day operations, including confidentiality agreements, assignment of inventions, service agreements, consulting agreements, end user licence agreements, evaluation agreements, hosting agreements, and maintenance and support agreements.
